Site Sampling History

This site was sampled in 2012 and 2016.

Assignment of the Test Site to a Group

The test site is assigned to a benthic insect community group (Group) based on the 2013 Yukon CABIN model (BEAST Prediction Results). The site is assigned to the Group for which it has the highest probability of belonging based on habitat attributes.

Predictor Variables	Altitude (ft), Longitude, LC-Bryoids (%), LC-Broadleaf open (%), LC-Mixed wood open (%), LC-Wetland herbaceous (%), Precipitation Feb (mm), Precipitation March (mm), Precipitation June (mm), Precipitation July (mm), Rainfall June (mm), April Max temp (C), Average Depth (cm), Average Velocity (m/s)				
Predicted Group	4				
Group	1	2	3	4	5
Probability that the site belongs to each Group	19.0%	15.4%	14.2%	47.7%	3.7%

Habitat Attributes of Site

This table reports on how the habitat predictor variables measured at the test site compare to the mean habitat predictor variables for the reference sites in the same group.

Variable	Site	Reference Mean	Reference SD

Altitude (ft)	1483	2296.81	838.01
Depth-Avg (cm)	27.00	29.80	14.62
Velocity-Avg (m/s)	0.87	0.52	0.32

Precip. MAR (mm)	33.31	27.46	11.91
Precip. JUN (mm)	53.99	53.49	18.49
Precip. JUL (mm)	70.30	65.85	22.37

Summary Results of the Benthic Invertebrate Data

The table presents the summary values of the benthic community of the test site compared to expected values and the average benthic community of the reference sites.

	Test Site	Reference Average	Reference Standard Deviation	Expected Families (RIVPACS)
Total Abundance	399.00	2059.44	1572.86	
Total No. of Taxa	14.00	12.95	4.37	12.0

This table shows how the benthic community of the test site compares to the average of the reference sites to which it is being compared. Both the presence of certain families and their abundance (the number of individuals found) are compared.

Family (bold = characteristic of group)	RIVPACS Prediction (probability)	Test Site (# of individuals)	Reference Average	Reference Standard Deviation
Chironomidae	0.98	268	911	827
Baetidae	0.79	70	233	309
Nemouridae	0.76	3	130	184
Simuliidae	0.76	7	207	367
Heptageniidae	0.66	0	120	216
Sperchontidae	0.55	0	35	60
Tipulidae	0.53	6	19	41
Empididae	0.50	1	18	37

Using the predictive model with the RIVAPCS weighted probability of the sites predicted membership, we would expect 12 families at this site, but 14 families were observed.

Total abundance is below average for this group and outside the normal range. Richness (total number of families) is slightly higher than expected.

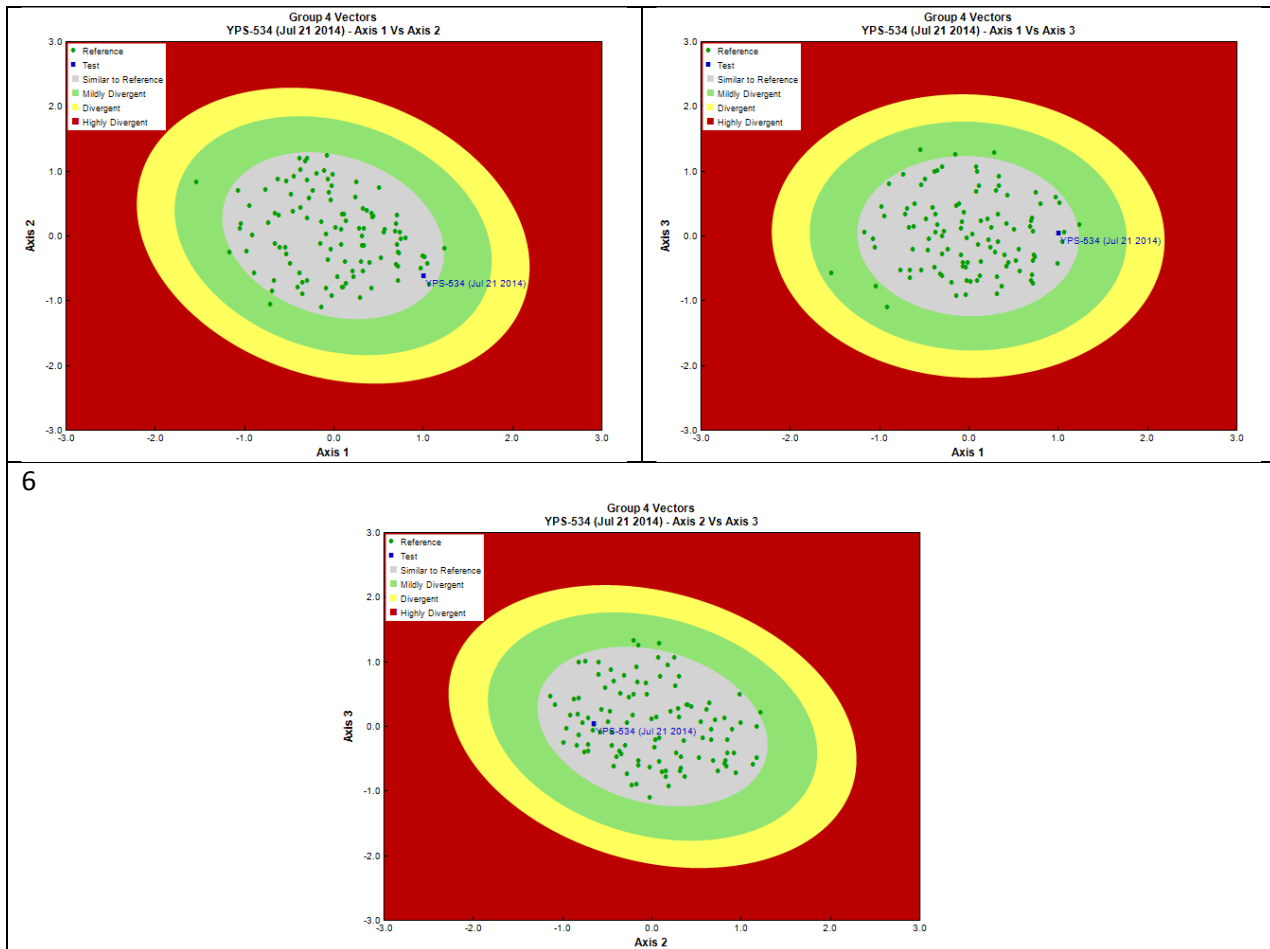

Of the 8 families expected to occur ($P > 0.5$), 2 (Heptageniidae and Sperchontidae) were absent.

Of the five families characteristic of the group to which this site was predicted, one (Heptageniidae) was absent.

Visual Reports on Site Condition

This figure displays three site assessment graphs which show the site relative to the group of reference sites to which it is compared. The three axes (or vectors) represent three dimensional space, and the probability bands (from center) are 75 - 90% (Similar to Reference), 90 – 99% (Mildly Divergent from Reference), 99 – 99.9% (Divergent from Reference), and outside 99.9% (Highly Divergent from Reference).

A 0-75% probability band was provided in past annual monitoring reports. Programming is currently being developed in order to incorporate this function into the CABIN model, however at this time the 0-75% band cannot be included here.

Assessment of Overall Site Condition

Vector 1 vs Vector 2	Similar to Reference
Vector 1 vs Vector 3	Similar to Reference
Vector 2 vs Vector 3	Similar to Reference
Overall	Similar to Reference

Using CABIN, YPS-534 is assessed as Similar to Reference.
